

ISMP List of Confused Drug Names

This list of confused drug names, which includes look-alike and sound-alike name pairs, consists of those name pairs that have been published in the *ISMP Medication Safety Alert!® Acute Care*, the *ISMP Medication Safety Alert!® Community/Ambulatory Care*, and the *FDA and ISMP Lists of Look-Alike Drug Names with Recommended Tall Man Letters*. We hope you will use this list to determine which medications require special safeguards to reduce the risk of errors. This may include strategies such as: using both the brand and generic names on prescriptions and labels;

including the purpose of the medication on prescriptions; configuring computer systems to require a minimum of the first five letters of a drug name during product searches to limit similar names from appearing together on the same screen; and changing the appearance of look-alike product names to draw attention to their differences. Both the US Food and Drug Administration (FDA)-approved and the ISMP-recommended tall man (mixed case) letters have been included in this list.
